

Sony Jumbotrons For Sale

Add the Excitement!

Winnipeg Enterprises Corporation operates the Winnipeg Arena located in Winnipeg, Manitoba Canada and selling our four (4) separate Sony CRT Jumbotron screens.

There are separate screens in the four corners of our Arena. WEC purchased the screens used from Sony Canada in 1999.

Jumbotron Screens

Each screen is made up of 88 separate JTV-22A3 panels (11 across and 8 high) and each panel consists of 32 separate Sony TL-2208 Trinitron cells. The entire system comes complete along with 10 complete spare panels filled with cells. Each screen measures approx 12' 8" wide by 9' 3" high. Sony claims that the four boards can be assembled together to make one or two larger screens. These configurations can also be reduced in size to custom fit any application. In the fall of 2003 Sony conducted a thorough reconditioning of all the JTV-22A3 panels.

Control Equipment

To produce an image and control the equipment there is a (FOR.A DEC 110 color processor), a (JTC-30B) Main control unit and a (JTO-109A) remote control unit. Plus a JTO-60SPG Test Jig. The system takes a standard 1v Video input. There is one main control unit so only one input is required to feed all four boards.

This equipment is available November 2004

Interested parties can arrange a technical tour with our Video technicians by contacting Graham Hunter at (204) 982-5404 or e-mail: ghunter@wpgenterprises.ca
